MANAGED SAAS PROPOSAL · 25 AUGUST 2026

WhatsApp AI Student Enquiry and Enrolment Support

A managed Chatbot.OM service proposal for course enquiries, lead capture, guidance, booking requests and follow-up.

PREPARED FOR	Taif Al-Kaabi and their Training Institute
PREPARED BY	Inzint LLC · Inzint Oman
PROPOSAL REFERENCE	INZ-OM-TK-20 260 825
VALIDITY	Indicative offer valid through 24 September 2026

AI and software, built for Oman.

01 EXECUTIVE PROPOSAL

A practical first step, with clear boundaries

Dear Taif, thank you for sharing what your institute needs. The requested journey is clear: answer course questions quickly, guide each prospective student, capture their details, help them take a next step, and give your team a reliable record for follow-up.

RECOMMENDED OPERATING PLAN

Business · OMR 40 per month

Includes 25,000 chat sessions per month; additional sessions are OMR 0.025 each. It is the recommended plan for an active institute intake cycle. Final activation remains subject to the WhatsApp readiness gate described below.

The proposal in four answers

Price	OMR 40/month recommended. Other paid options are shown on page 6. There is no separate discounted annual tariff in this offer.
Timing	Configuration can begin immediately. WhatsApp activation normally depends on number and template approval; the final schedule will be confirmed after technical readiness testing.
Customization	The monthly SaaS can be configured for branding, assistant name, institute data, questions, rules and supported workflows, but it is not a fully custom or customer-owned codebase.
Support	Yes. Managed maintenance and remote support are included during an active subscription; response targets and service hours are fixed in the final order form.

DEPLOYMENT GATE

WhatsApp is confirmed before it is promised as live

This indicative proposal does not assume an already-operational WhatsApp transport. Inzint will validate the proposed business number, provider path, inbound and outbound flows, and end-to-end message delivery before the final order form and go-live date. Any non-standard engineering will be separately identified and approved.

02 PROPOSED STUDENT JOURNEY

From first question to a staff-owned enrolment lead

The assistant is designed to make the early part of enrolment immediate and consistent. It handles approved information and routine next steps; your staff keep control of final enrolment, payment and any decision that depends on judgement or live capacity.

01 ASK	02 GUIDE	03 CAPTURE	04 BOOK	05 HAND OVER
Courses, prices, dates, locations and conditions	Match by goal, level, timing and preference	Name, phone, interest, intake and notes	Trial or consultation; record a seat request	Qualified lead, context and next action

What the assistant can be taught

- Course catalogue: descriptions, target audience, prerequisites and learning outcomes.
- Commercial information: approved prices, discounts, payment conditions and refund rules.
- Operations: intake dates, schedules, locations, class formats and contact details.
- Conversation rules: what it may answer, what it must not promise, and when it must hand over to a person.

What your team can monitor

The dashboard provides conversation logs, contact records, qualified leads, lead status, notes, assignees, knowledge sources, appointments, sentiment and activity trends. It is a conversation-and-lead dashboard, not a replacement for a full student information or institute-management system.

SAFE GUIDANCE

Conversational course recommendation, not an eligibility engine

The assistant can recommend suitable courses from the approved catalogue and the student's stated goals. Formal eligibility, certification, credit transfer or complex prerequisite decisions remain with institute staff unless a dedicated rules engine is separately built.

03 RESPONSE TO YOUR REQUIREMENTS**What is included, conditional or separately scoped**

The table below is the controlling scope summary for this proposal. A conditional or separate item is not included in the base monthly fee unless it is added to the final order form.

REQUEST	POSITION	SAAS RESPONSE	BOUNDARY
WhatsApp Business + AI replies	READINESS-GATED	Proposed after the number, provider path, inbound replies and approved outbound templates pass end-to-end testing.	Not represented as live before UAT; non-standard engineering may require a separate quote.
Institute knowledge	INCLUDED	Upload approved course, price, schedule, location and policy content from documents or a website.	Institute supplies and approves the source material; the assistant is instructed not to invent missing facts.
Student data capture	INCLUDED	Capture configured fields and preserve the conversation; qualified enquiries become lead records with score, status, notes and owner.	Anonymous or low-information conversations may remain logs rather than automatically becoming leads.
Course selection help	INCLUDED	Conversational guidance from the approved catalogue using goals, level, timing and preferences.	No deterministic eligibility or prerequisite engine is included.
Booking and confirmations	PARTIAL	Book a trial or consultation in available appointment slots; standard confirmation is by email with a calendar invite.	No native live course-seat capacity, final enrolment or standard WhatsApp confirmation/reminder.
Follow-up for non-registrants	PARTIAL	Lead stages, notes, staff ownership and follow-up tracking are available in the dashboard.	Automatic identification and WhatsApp messaging of non-registrants is separate automation work.
Future CRM / institute system	INTEGRATION-READY	APIs, webhooks and Zapier events can carry leads, appointments and conversation events.	Target-specific mapping, authentication, testing and bidirectional sync are separately scoped.
Management dashboard	INCLUDED	Monitor conversations, qualified leads, contacts, appointments, common questions, tasks and sentiment/activity trends.	It is not a student information, attendance, payment or certificate-management system.

Scope note: Where the institute later adds a compatible CRM or management system, the current platform can be used as the conversation layer and connected through a separately approved integration scope.

04 CUSTOMIZATION AND OWNERSHIP**Monthly SaaS is configurable, not fully custom**

Under the monthly model, Inzint operates the software and gives the institute access to a managed service. Configuration is intentionally bounded so upgrades and maintenance remain manageable across subscribers.

MONTHLY SAAS**Configuration included**

- Assistant name, greeting, tone and system instructions
- Brand colours, theme, launcher text/icon and welcome message
- Course, fee, timetable, location, condition and policy data
- Lead fields, qualification questions and conversation guardrails
- Working hours, timezone, appointment duration and basic team access

SEPARATE PROPOSAL**Owned copy / custom software**

- Custom student, course, cohort, seat-capacity and enrolment modules
- Deep CRM or institute-management workflows and bespoke integrations
- Custom data model, roles, dashboards and approval processes
- Customer-controlled deployment, release cadence and security architecture
- Source-code handover, ownership/licence rights and long-term roadmap control

DIRECT ANSWER TO QUESTION 3**Limited customization is included; full control requires an owned solution**

If Taif Al-Kaabi would like unrestricted customization and control of the software, Inzint will be happy to prepare a separate one-time custom-software proposal. That option is not priced or included in this monthly SaaS offer.

Changes during the subscription

Routine updates to approved content and reasonable in-scope configuration changes can be handled through support. New transports, modules, data structures, third-party connectors or material workflow redesigns are assessed and quoted separately before work begins.

05 COMMERCIAL OFFER**Choose by conversation volume**

The paid plans below share the standard product capability set. The published differences are the monthly session allowance and overage rate. Technical activation and any separately scoped integration work remain governed by the final order form.

RECOMMENDED**Business · OMR 40/month**

25,000 sessions each month, then OMR 0.025 per additional session. This gives the institute enough headroom for an active intake period without moving directly to an unlimited plan.

PLAN	MONTHLY	SESSIONS	EXTRA SESSION	POSITIONING
Starter	OMR 10	2,000	OMR 0.050	Limited preview only; not recommended for a live enrolment cycle.
Business	OMR 40	25,000	OMR 0.025	Recommended for normal institute operations.
Enterprise	OMR 135	Unlimited	None	High-volume use where session overage must be eliminated.

Annual pricing

No separate discounted annual tariff is included in this offer. For budgeting only, twelve months at the current base monthly rates equal OMR 120 for Starter, OMR 480 for Business and OMR 1,620 for Enterprise, before any additional-session usage or separately approved work.

Commercial notes

- All amounts are stated in Omani Rials (OMR).
- Usage is measured by the platform session counter; the session boundary will be defined in the final order form.
- No implementation fee, tax treatment or third-party platform charge is assumed in the amounts above; any applicable item will be confirmed before order acceptance.
- The subscription provides a right to use the managed SaaS service. It does not transfer source code, infrastructure or ownership rights.

06 IMPLEMENTATION AND SUPPORT

A short configuration cycle, then a controlled launch

The standard configuration work can move quickly once the institute's information and access are ready. WhatsApp is the schedule dependency because its number, provider path and outbound templates must be approved and tested.

1	READINESS	Confirm channel path, number status, consent basis, scope and selected plan.
2	TEACH	Load approved course, fee, schedule, location, policy and FAQ content.
3	CONFIGURE	Set assistant name, tone, questions, lead fields, handover rules and appearance.
4	TEST	Run representative Arabic/English questions, lead capture, booking and handover checks.
5	LAUNCH	Approve go-live, monitor early conversations and refine in-scope content.

Indicative duration

TIMING ANSWER

Typically a few days after complete inputs

Inzint starts the technical and template readiness work on day one. The committed go-live date will be issued after the proposed WhatsApp number and messaging flow pass readiness checks; third-party approval timing is outside Inzint's direct control.

Support and maintenance after launch

Yes. During an active subscription, Inzint provides managed platform maintenance, routine fixes and updates, incident support, and reasonable assistance with in-scope content or configuration changes. The final order form will state support channels, business hours, response targets and any enhanced-service option.

Separately charged work includes new product features, major workflow redesign, custom integrations, data migration or cleanup, customer-specific infrastructure, content authoring, and owned-software development.

07 ASSUMPTIONS AND NEXT STEPS

What we need from the institute

- An approved course catalogue, current prices, schedules, locations, terms and frequent questions.
- A decision on which WhatsApp Business number is proposed and confirmation of its present account status.
- Approved consent language and proposed outbound template wording for confirmations or follow-up.
- A named institute owner for answers, testing, lead routing and final go-live approval.
- Details of any CRM, calendar or institute-management system that may be connected later.

Important boundaries

ENROLMENT	Final enrolment, payment and live course-seat capacity remain with staff unless a separate system integration or custom module is approved.
MESSAGING	Automated outbound WhatsApp confirmations, reminders and non-registrant follow-up are not included until the WhatsApp channel and automation are expressly activated in the order form.
INTEGRATIONS	The platform is integration-ready, but target-system mapping, authentication, testing and support are not turnkey inclusions.
HOSTING	This indicative SaaS offer does not promise Oman-only or customer-controlled hosting. Any residency, on-premises or private-cloud requirement needs a separate deployment and security scope.
CONTENT	The institute is responsible for the accuracy, authority and timely update of course, price, schedule and policy information supplied to the assistant.

To proceed

1. Confirm the preferred plan. Business is the recommended operational option; Starter is intended only for a limited preview.
2. Share the proposed WhatsApp number and the institute information listed above.
3. Complete a short readiness and scope review with Inzint.
4. Receive and approve the final order form, including activated channels, implementation items, support terms and go-live date.

NEXT CONVERSATION

We would be happy to walk Taif through the scope

Contact Inzint Oman at (+968) 7272 4832 or contact@inzint.om. If full ownership and unrestricted customization are preferred, ask for the separate owned-copy/custom-software proposal.
